Workshop on FORM and SPACE (28.08.2018) for I Year Students

As per VTU norms this year 2018-19 and as part of induction programme, a **workshop** was conducted for the first semester GSAP students where they got a hands-on experience to explore the recycled materials. They used the **disposed carton boxes** to create three dimensional forms by cutting them into different shapes and re-construct a sculptural form through a spontaneous process without attributing any functional aspect to it. The objective is to understand and explore 'space around' and 'space within' a form without having pre-conceived idea/concept. They were asked to utilize and retain the natural characteristics of the material like colors and textures by emphasizing on the significance of recycling. These induction programme was mooted by Prof. K. V. Krishna Murthy Dean, GSAP & Principal Dr. S. Sathish to get the best works by new entrants in to the fold of the noble profession- Architecture.
